

**Press release: 16 March 2004**

***AuthorServ: A New Service for Authors of Scientific Papers***

*AuthorServ* is a new initiative from a well-established prepress supplier, providing a complete range of services to help authors of scientific papers to prepare top quality text and graphics.

Authors can send draft files via [www.authorserv.com](http://www.authorserv.com) for copy editing and language correction. The result will be a top quality article ready for publication in the chosen journal and graphics prepared for their intended use, be it web or print publication. Permissions can be arranged for material published elsewhere. The project management team can deliver on schedule no matter how big or small the project.

*AuthorServ* is a one-stop shop to get material ready for publication.

The team at *AuthorServ* has been working in the production of scientific publications for more than 20 years. The key issues today are speed and technology. Authors need to prepare their papers to a high standard at the outset to ensure a quality publication.

But how many scientists have the time to become copy editors, experts in punctuation, good English, document formatting, setting up complex tables, and so on?

*AuthorServ* can accomplish all these tasks using a network of experienced people. Contact them via [www.authorserv.com](http://www.authorserv.com) or directly by email to [lorna@authorserv.com](mailto:lorna@authorserv.com).
